p.3

Appl. No. 09/995,726 Amendment dated January 5, 2005 Reply to Office Action of October 5, 2004

This listing of claims is the original claim set:

Listing of Claims:

(Currently Amended) A method of controlling service acquisition in a wireless local area 1. network (WLAN) device, the method including the steps of:

determining a parameter that corresponds to a present environment for the WLAN device; comparing said parameter to a predetermined value to provide a comparison, said predetermined value defining, in part, an environment where service for the WLAN device is desirable, the service provided from a second WLAN device;

analyzing said comparison according to a rule to provide a decision;

enabling a service acquisition mode when the decision is favorable, wherein the service acquisition mode facilitates coupling to the second WLAN device; and

foregoing said service acquisition mode when the decision is unfavorable, wherein power supply capacity is conserved when the decision is unfavorable.

- (Original) The method of claim 1 wherein said step of determining a parameter includes 2. determining a location of the WLAN device.
- (Original) The method of claim 2 wherein said determining said location uses one of a 3. cellular zone ID, a global position system (GPS) signal, and a signal strength measurement.

Appl. No. 09/995,726 Amendment dated January 5, 2005 Reply to Office Action of October 5, 2004

- 4. (Original) The method of claim 1 wherein said step of determining a parameter includes determining a time at the WLAN device.
- 5. (Original) The method of claim 1 wherein said step of determining a parameter includes determining a state relevant to the WLAN device.
- 6. (Original) The method of claim 5 wherein said determining said state includes one of detecting a need for service and a reference to a schedule database.
- 7. (Original) The method of claim 1 wherein said step of determining a parameter includes determining a combination of location, time, and state for the WLAN device.
- 8. (Original) The method of claim 1 further including a step of providing said predetermined value for the WLAN device.
- 9. (Original) The method of claim 8 wherein providing said predetermined value includes programming the WLAN device with one of a location, time, and state.
- 10. (Original) The method of claim 8 wherein providing said predetermined value includes memorizing one of a location, time, and state when service has been acquired.

p.5

Appl. No. 09/995,726 Amendment dated January 5, 2005 Reply to Office Action of October 5, 2004

(Original) A wireless local area network (WLAN) device arranged and constructed to 11. control service acquisition comprising in combination:

a transceiver for coupling to a second WLAN device;

a user input output (I/O) for interacting with a user; and

a controller, coupled to said user I/O and said transceiver, for deciding whether said transceiver will enter a service acquisition mode thereby coupling to said second WLAN device by;

determining a parameter that corresponds to a present environment for the WLAN device; comparing said parameter to a predetermined value to provide a comparison, said predetermined value defining, in part, an environment where service for the WLAN device is desirable;

analyzing said comparison according to a rule to provide a decision; enabling said service acquisition mode when the decision is favorable; and foregoing said service acquisition mode when the decision is unfavorable.

- (Original) The WLAN device of claim 11 wherein said step of determining a parameter 12. includes determining a location of the WLAN device.
- (Original) The WLAN device of claim 12 wherein said determining said location uses 13. one of a cellular zone ID, a global position system (GPS) signal, and a signal strength measurement.

Appl. No. 09/995,726 Amendment dated January 5, 2005 Reply to Office Action of October 5, 2004

- 14. (Original) The WLAN device of claim 11 wherein said step of determining a parameter includes determining a time at the WLAN device.
- 15. (Original) The WLAN device of claim 11 wherein said step of determining a parameter includes determining a state relevant to the WLAN device.
- 16. (Original) The WLAN device of claim 15 wherein said determining said state includes one of detecting a need for service and a reference to a schedule database.
- 17. (Original) The WLAN device of claim 11 wherein said step of determining a parameter includes determining a combination of location, time, and state for the WLAN device.
- 18. (Original) The WLAN device of claim 11 further including a step of programming said predetermined value for the WLAN device.
- 19. (Original) The WLAN device of claim 18 wherein providing said predetermined value includes programming the WLAN device with one of a location, time, and state.

p.7

Appl. No. 09/995,726 Amendment dated January 5, 2005 Reply to Office Action of October 5, 2004

- (Original) The WLAN device of claim 18 wherein providing said predetermined value 20. includes memorizing one of a location, time, and state when service has been acquired.
- (Original) The WLAN device of claim 11 arranged and constructed to operate within one 21. of a Bluetooth, 802.11, and Home RF based wireless WLAN.
